Spring-loaded tooling pin

GFS-5,98-SW-12-08-B-G

Item 25217

- Trusted tooling pin for reliable, spring-loaded mounting of the PCB via the quide holes
- High-precision and low-wear
- Optimum tolerance compensation
- Compact design with internal spring

Application

Spring-loaded tooling pins (GFS) are used to spring-load the PCB to be tested via the guide holes and position it precisely in the probe field on the contacting plane.

Note:

The spring-loaded tooling pin is mounted in the moving plate (ADP) and must be positioned with the collar flush to the surface of the moving plate.

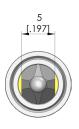

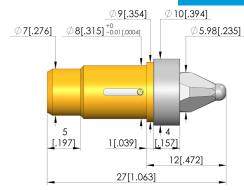

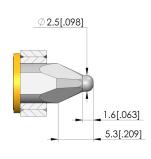

1:

Note

Depending on the shape and tolerance accuracy of the PCB, tooling pin combinations with round/round or round/blade tip styles are used. The long side of the blade must always be aligned perpendicular to the distance of the hole.
