The name INGUN stands for Quality through Precision, for high-quality test equipment products- made in Germany. INGUN aims to combine the best possible product quality with effective environmental protection.

Sustainable and socially responsible management is a long-term success factor and innovation driver for INGUN, because only those who do business economically can also act in an ecologically and socially responsible manner. We make a committed and far-sighted contribution to shaping a future worth living - sustainability is not an abstract concept, but a conscious safeguarding of the future.

California Proposition 65 is short for the Safe Drinking Water and Toxic Enforcement Act, which was published in 1986 in California Health & Safety Code Section 25249.6. It regulates a total list of about 1000 substances with the aim of protecting human health from carcinogens and mutagens. It is intended as a consumer law and therefore only affects manufacturers of products intended for end consumers.

We, INGUN Prüfmittelbau GmbH, exclusively manufacture testing technology for the industrial production of electronic articles - our customers are exclusively commercial. Furthermore, due to potential applications, it is not to be expected under normal circumstances that our products or parts thereof will be installed and used in end products intended for consumers or that end consumers will encounter our products. **Therefore, we can declare that our company does not fall within the scope of the Safe Drinking Water and Toxic Enforcement Act and that we are not obliged to fulfil any information requirements.**

For specific questions regarding composition of our products or other regulations, please feel free to contact us at any time.
