ingun[®]

Partner for Future Technology

- Spare parts kit for reliable preventative maintenance
- High-precision guide pins with guide bushes
- Centring accuracy of +/- 0.05 mm
- Precise, low-friction contacting
- Easy exchange

Application

Spare parts are necessary as part of preventive maintenance, or as soon as components wear out during normal operation and need to be replaced. Guide pins are used in combination with compatible guide bushings for precise, low-friction contacting. This is primarily to minimise the lateral and torsional forces acting on the stroke movement and to ensure reliable, accurate contact.
