- Suction device for electric board marker probe (ME)
- Suction to remove shavings caused by the marking process
- Removeable collection container (no tools required)
- Quick, easy installation

Application

The suction device minimises unwanted contamination caused by the marking process. The shavings produced are extracted pneumatically using the trusted Venturi principle by means of a vacuum suction nozzle, fed through an extraction head to a collection container with a filter insert, and collected there. The collection container can be detached without tools and emptied with minimal effort.
